Current Location: Delhi NCR, Noida, Gurugram

Summary

4+ YOE Software Engineer with hands-on experience in building scalable full-stack applications with NodeJs, NestJs, MongoDB, ExpressJs, TypeScript, JavaScript, MySQL, CI/CD, Docker, AWS, ReactJs, Redux, SvelteJs, NextJs. Proficient in DSA, LLD, HLD, System Design. 600+ DSA problems across various platforms.

Experienced in AWS EC2 deployments, RESTful & GraphQL API design & development, Redis caching for improved performance. Exposure in Micro-Fronted Architecture and implementation of backend services using TypeScript, Node.js, NestJS, Express.js, MongoDB, PostgreSQL, MySQL, AWS.

Technical Skills:

- Languages: JavaScript, TypeScript, Java, C, Python, SQL
- Backend: NodeJs, ExpressJs, NestJS, CI/CD, Docker, GraphQL, REST APIs
- Frontend: ReactJs, NextJs, Svelte, Redux, Tailwind CSS, Antd
- Databases: MongoDB, Mongoose, SQL, PostgreSQL, MySQL, Prisma
- Cloud & Tools: AWS (EC2, S3, RDS, Redshift), Git, Github, Postman, Shopify Apps, Agile, SDLC
- Core CS: DSA, System Design, DBMS, LLD, HLD, Computer Networks

Professional Experience

MelodyArc / ElbowCurve, Delhi

December 2025 – Present

SDE – 1 (Software Development Engineer)

- Built 15+ conversational AI workflows that understand customer intent, maintain order context, fetch real-time data from enterprise systems, and execute multi-step support journeys across returns, cancellations, refunds, delivery tracking, and other post-order use cases.
- Designed and implemented reusable Portal, Value, Invoke & Code points that orchestrate AI agents and backend actions to accomplish end-to-end business workflows.
- Integrated and tested 40+ enterprise APIs spanning REST, GraphQL, OAuth, Basic Auth, and internal service platforms, enabling real-time order servicing and customer support automation.
- Worked on creation and refinement of AI Agents which worked in conjunction to elicit Agentic AI
- Authored and optimized 20+ AI prompts, policies, action instructions, and decision rules, improving response quality, workflow accuracy, and automation coverage.
- Investigated and resolved 40+ prod issues and integration blockers, including authentication failures, API contract mismatches, workflow breakdowns, network connectivity issues.
- Created 10+ technical docs, API implementation guides, process playbooks, and KT artifacts to standardize integrations.
- Built multiple forms and static UI screens in DSL by leveraging an inhouse UI-driven framework.

Gokwik, Gurugram

August 2023 – Dec 2025

SDE – 1 (Software Development Engineer)

- Designed and implemented scalable e-commerce solutions serving 300+ Shopify stores and lakhs of end users, integrating checkout, payments, shipping, risk-verification workflows, etc.
- Automated the whole process of deploying Gokwik's checkout on merchant stores which was earlier done manually by 4 front-end devs, this feature freed up their bandwidth up to 70%.
- Designed and developed the merchant onboarding flow via Gokwik's dashboard responsible for ramping-up 100's of merchants weekly, along with capturing user behavior and events.
- Successfully completed 10+ Proof of concepts which were later proved to be vital features and gave us the competitive edge over rivals.
- Spearheaded 4+ key projects involving full-stack development, dynamic data handling, API integrations, and application performance optimization.
- Designed RESTful APIs with Zod validation, GraphQL APIs, Redis caching, improving response time and reliability.
- Implemented multi-level authentication and authorization systems, including JWT (access & refresh tokens), OAuth, and API key-based access.
- Created several single page applications leveraging modern frameworks like ReactJs, NextJs, Svelte, TypeScript, and Ant Design, delivering clean, maintainable, and efficient codebases.
- Deployed applications on AWS EC2 using CI/CD pipelines (GitHub Actions) for automated testing and deployment.
- Solved critical production bugs with zero downtime, improving platform reliability.

CodeCorners, Mohali, PB

June 2023 – July 23

MERN Stack Developer

- Worked on the In-house project management tool used by 100+ employees, which is used for tracking tasks and issues in the organization and created it from scratch using MERN (ReactJs, Express, NodeJs, MongoDB), TypeScript, Prisma, etc
- Leveraged NodeJs, ExpressJs for creating the backend of the tool from scratch. Created 25+ APIs for performing CRUD operations on multiple fields like comments, projects, tasks and lists
- Made use of Prisma as the ORM tool for creating the database schema, used MySQL in backend
- Used TypeScript for type checking and to organize code to be maintainable and easy refactoring
- Worked on a Dashboard application and used GraphQL queries and ApolloClient for fetching data from the backend and implemented full CRUD functionality for multiple Users and Roles.

Freelance Consultant, Remote

June 2022 – June 23

Software Developer

- Developed full-stack web applications using React, Next.js, Node.js, REST APIs, and SQL/NoSQL databases, delivering responsive and production-ready solutions for various clients.
- Wrote APIs for user authentication like Signup, Login, Logout & Reset Password. Made use of JWT for creating tokens and Cookies for storing them in server side
- Designed and developed various UI interfaces and web apps, made use of HTML, CSS, Vanilla Javascript, Tailwind CSS, MUI and ReactJs, created efficient, attractive, and responsive interfaces.

Projects

Gokwik Payments App

Developed and enhanced a production payments application integrated with 300+ Shopify stores, supporting UPI, QR Codes, Credit/Debit Cards, EMI, CredPay, Wallets, and other payment methods. Worked across payment workflows, API integrations, browser storage, and backend services to deliver reliable transaction experiences.

Tech Stack: NestJs | MongoDB | MySQL | Redis | Svelte | JavaScript | SCSS | REST APIs

Checkout App

Built an end-to-end e-commerce checkout system supporting cart management, shipping selection, address management, discounts, and payment gateway integrations. Implemented backend APIs and database interactions using NestJS, MongoDB, MySQL, and Mongoose, while applying caching, lazy loading, memoization, API-call optimization, and static-resource compression to improve application performance and achieve up to 30% improvement in conversion.

Tech Stack: NestJS | Node.js | JavaScript | MongoDB | Mongoose | MySQL | REST APIs | Svelte.js

Education

upGrad.com

Programming Bootcamp, Full Stack Web Development, MERN Stack

Jun 2022 - Feb 2023

Rajasthan Technical University, Kota

B.Tech, Electrical Engineering

July 2015 - July 2019
